

...the environment matters.

At Beaulieu Canada, water is a source for fresh new thinking. Indeed, we were the first carpet mill to source 100% of our energy from renewable sources. Today, all three of our Canadian mills are run with hydroelectric energy complemented with wind energy while all of Beaulieu Commercial mills obtain 100% of their energy from wind farms.

We are committed to creating fashion flooring solutions designed to make a beautiful impact on the lives of our customers, while reducing our impact on the world's natural resources. We are proud to be putting our energy into achieving greater sustainability because...the environment matters for us all. By harnessing the force of water, we are transforming how we do business.

These are just a few of the carpet styles manufactured using renewable energy.
